ALERT: Total Solar Eclipse Affecting Morocco - AUGUST 02, 2027

SOLAR SAFETY ECLIPSE

On Monday, August 2, 2027, a total solar eclipse will cross North Africa and the Middle East, with Morocco positioned as one of the premier viewing locations in the world. The path of totality will sweep across the northern tip of the country, offering a rare and spectacular celestial event.

According to astronomical data, a solar eclipse occurs when the Moon passes between the Earth and the Sun, casting a shadow that temporarily obscures the Sun's light. For those in the path of totality, the sky will darken into a deep twilight, and the Sun's corona will become visible.

A total eclipse can last up to four minutes, depending on your location. You can see the Sun and an eclipse with special eclipse or solar viewing glasses.

NEVER look directly at the Sun without appropriate eyewear.

Regular sunglasses are NOT safe to view an eclipse.

WARNING: Looking at the sun is dangerous. Refer to safety instructions on the next page.

ALERT: Total Solar Eclipse Affecting Morocco - AUGUST 02, 2027

SOLAR SAFETY ECLIPSE

To help you choose the ultimate viewing location, our interactive map plots the exact trajectory of the lunar shadow alongside historical weather data. For a total solar eclipse, cloud cover is the ultimate deciding factor, and the 2027 path offers historic conditions.

Because the sun will be partially visible leading up to and immediately following totality, looking directly at it without protection will cause permanent eye damage. To experience the event safely, adhere to these strict guidelines:

Beware of Silent Eye Damage (Solar Retinopathy): Your retinas do not have pain receptors, meaning your eyes can burn without you feeling any discomfort. Never look at a partial eclipse assuming you are safe just because it doesn't hurt.

Bring Hydration & Shade:

August in Morocco is exceptionally hot.
